Learning matrix

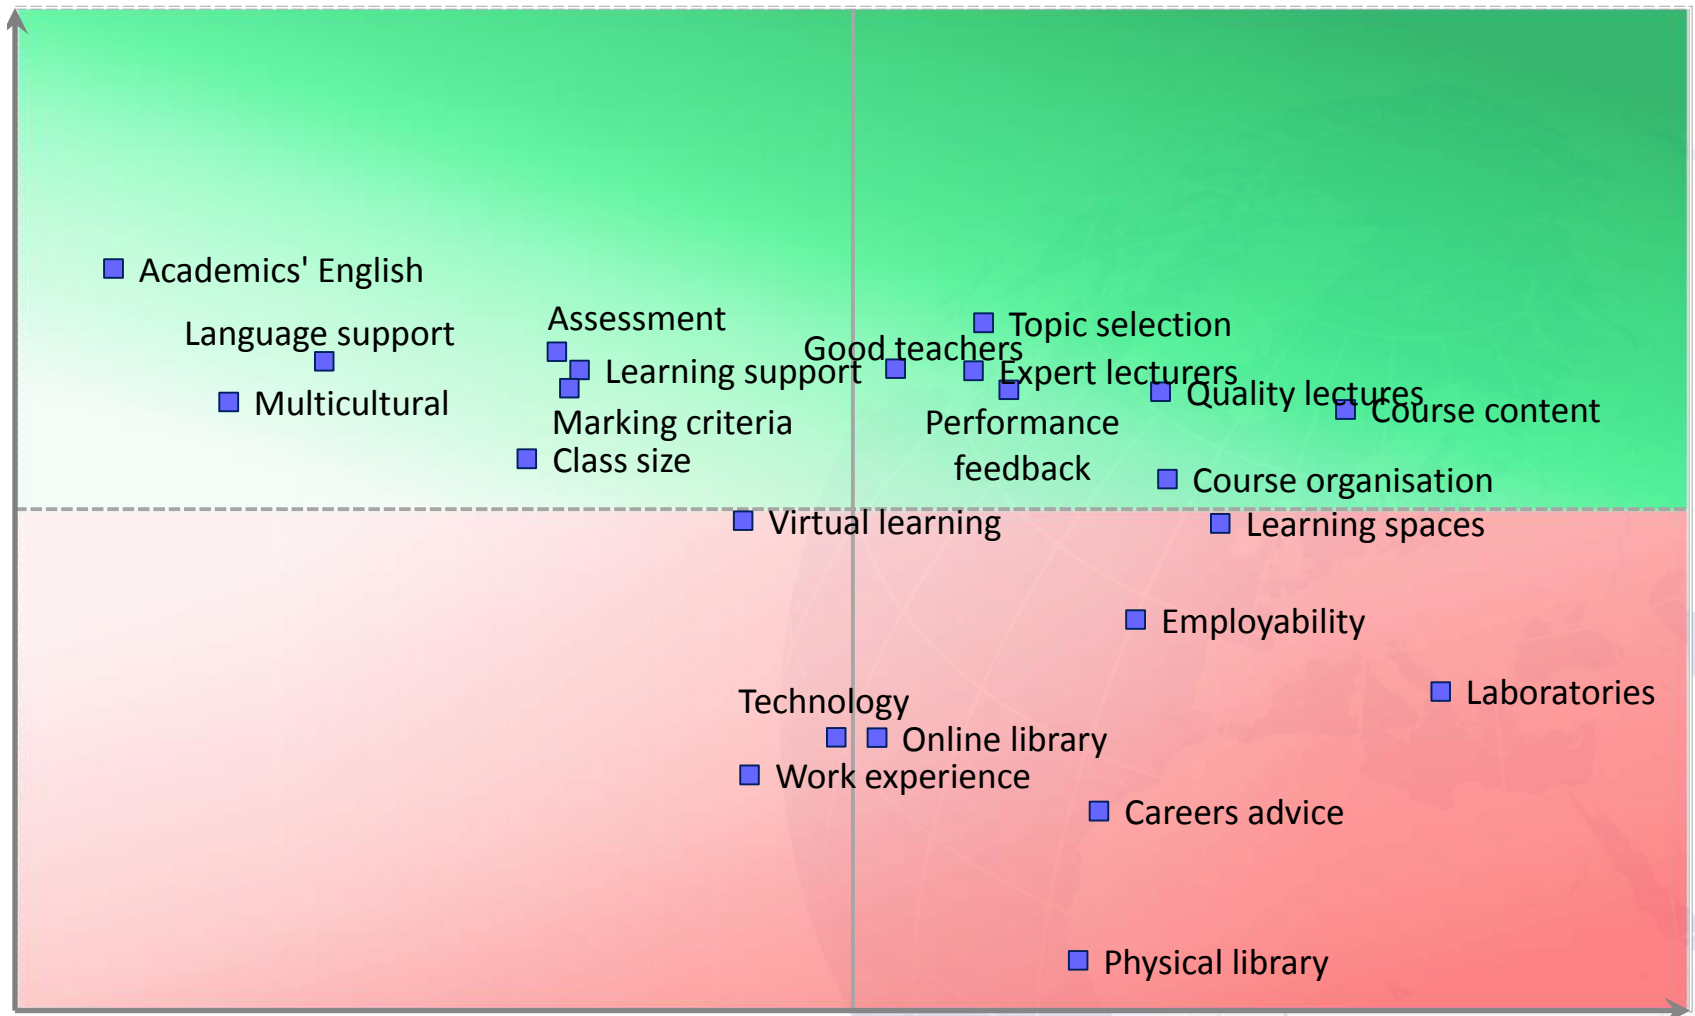

Elements in the top right quadrant are important to students and perform well. Those in the bottom right quadrant are important, but do not perform as well and should be improved.

Elements in the top and bottom left quadrants are of lower priority. These elements should be reviewed and monitored to ensure that we focus on the most important issues for students.

Key observations

Key observations

- Overall, relatively high levels of satisfaction amongst students
- New Zealand's performance on par with or slightly above global benchmark on many elements
- BUT around ¼ of students would not recommend their institution – key to understand why this is and try to address
- Particular areas that may benefit from attention:
 - Work-related factors – work opportunities more important to students in New Zealand than global average, but satisfaction around work relatively low
 - Cost-related factors (may be linked to above)

Thank you!

Measuring importance

Stated vs. Derived Importance

1. Students were previously asked to state the importance of each element to them in the Student Barometer
2. Importance is now 'derived' rather than 'stated'

Rationale

1. Stated importance only varies slightly by institution – therefore less useful at an institution level for understanding key priorities
2. Derived importance varies much more by institution
3. Questionnaire is significantly shorter reducing survey time for students
4. Outputs and insight will remain the same – i.e. the Student Barometer will still run satisfaction vs. importance matrices

Measuring importance

How it works

- Students' satisfaction ratings on the arrival, learning, living and support elements are correlated with their likelihood to recommend their institution.
- A higher correlation means that the *relationship* between the element and the likelihood to recommend the experience is strong.
- Derived importance thus shows which factors have the greatest impact on recommending the institution to others.
