

Overall student visa trends December 2016

1. Student visas verses visitor visas:

- Student visas only capture students who enter New Zealand with a student visa. These students are mostly those who are planning to study for more than three months.
- Students who undertake a course less than three months in duration are not required to enter on a student visa. Students who do choose to enter on a visitor visa (usually from visa-free nationalities) are not captured in this dashboard.
- Working holiday visas also allow students to study for up to six months. Those who enter NZ on a working holiday visa and plan on taking up this option are also not included in this dashboard. These factors will impact the private training establishments (PTE; including English Language Schools) numbers.

2. Student visas vs. enrolments:

- There is a potential delay of up to three months between students having their visas approved and their actual entry into New Zealand, therefore the figures shown here may not necessarily represent the actual number of students currently in New Zealand.

3. Other exclusions:

- This dashboard excludes dependants, applicants under Section 61, and Variation of Conditions. Dashboards prior to May 2015 include approvals from “all” applicants, including dependants.

1. Total student visas (TSV), for 2016 decreased by 4% (-3,556) compared to 2015. First time student visas (FSV) decreased by 12% (-5,468), and returning student visas (RSV) increased by 4% (+1,912) compared to 2015.
2. However, when 2016 is compared to an average of the previous three years, there were increases for all types of visas. TSV increased by 10% (+7,887), FSV increased by 4% (+1447) and RSV increased by +16% (+6,430).
3. Indian FSV decreased by 5,180 (-41%) in 2016 when compared to 2015.
 - The surge in FSV applications prior to Rule 18 implementation created a bubble of FSV in 2015 which has exacerbated the decline.
 - Indian FSV decreased by 25% (-2,537) compared to an average of the previous three years. Indian TSV for the month of November 2016 (766) are now at the lowest since December 2013.
 - Despite the decrease in FSV, total Indian student numbers from January to August 2016 had increased by 14% (compared to the same period in 2015), although student numbers slightly dropped in the private training enterprises (PTE) sector.
4. Chinese TSV increased by 9% (+2,575) from 2015 to 2016, which helped offset some of the decline in FSV from India. Compared to an average of the previous three years, the growth was 24% for China.
 - FSV for China are up 27% (+2,029) compared to the average of the previous three years.
 - Most FSV increase is from the PTE sector (+863).
 - RSV for China are up 22% (+4,135), with increases at universities (+1,498), PTE (+1,059) and secondary schools (+1,042).

Outlook

5. Ministry of Education student numbers for 2016 are expected to be up 5-7% on 2015 numbers (unavailable until circa April 2017).
6. However, student numbers for 2017 are anticipated to be slightly down on 2016 numbers as the decline in Indian student visas begins to manifest in enrolments.

Comparison to previous years (Cumulative)

FSV approved - cumulative

TSV approved - cumulative

- TSV are down (-4%) compared to last year (2016: 87,436 TSV v 2015: 90,992 TSV)
- TSV increased (+10%, +7,877) compared to the average of the last three years.
- Overall FSV are down 12% (-5,468) compared to 2015 (2016: 39,533 vs. 2015: 45,001). However, they remain 4% up on the average of the previous two years (+1,447).
- RSV increased by 4% (+1,912) from 2015 which has partially offset the decrease in FSVs.
- The main decline in FSV compared to the three year average has come from India (-25%, -2,537). The 7,603 FSV issued to Indians is the lowest since 2013.
- Increases in FSVs from China (+27%, +2,029), and a few other countries will help cushion the decline in FSV from India.

Month-on-month comparison to previous year

- December 2016 FSV (-5%, -232) and RSV (-2%, -47) were both down compared to December 2015.
- The main driver of this drop was Indian TSV (-27%, -284). This was partially offset by increases in German, Chinese and Filipino visas.
- The main driver of the drop in FSV was also India (-26%, -197) and Japan (-120, -25%), which has also been partially offset by increases in German, Chinese and Filipino visas.

Trends by market

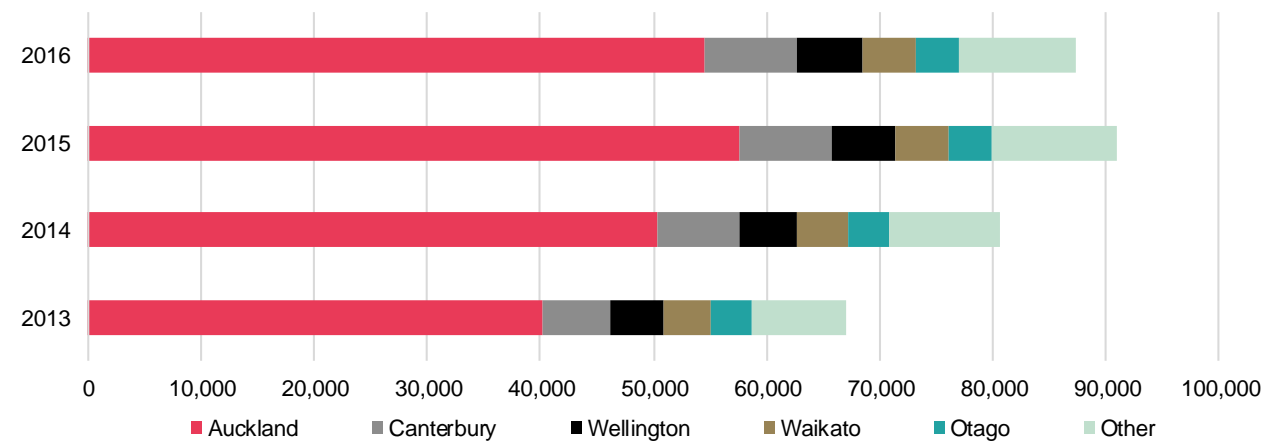

TSV, for 2016 decreased by 4% (-3,556) compared to 2015. FSV decreased by 12% (-5,468), and RSV increased by 4% (+1,912) compared to 2015. However, when TSV are compared to an average of the previous three years, a 10% increase can be seen, which was mainly driven by increases in visas for students studying in the PTE sector.

China

December 2016

TSV increased by 9% (+2,575) from 2015 to 2016. However, when compared to an average of the previous three years, Chinese TSV increased by 24%. This rise was in all sectors, with the schools and PTE sectors showing the largest growth. Auckland led the growth in TSV; however all regions apart from Taranaki increased in Chinese TSV compared to an average of the previous three years.

RSV 87 ↑ 10%

FSV 55 ↑ 6%

TSV 142 ↑ 8%

India

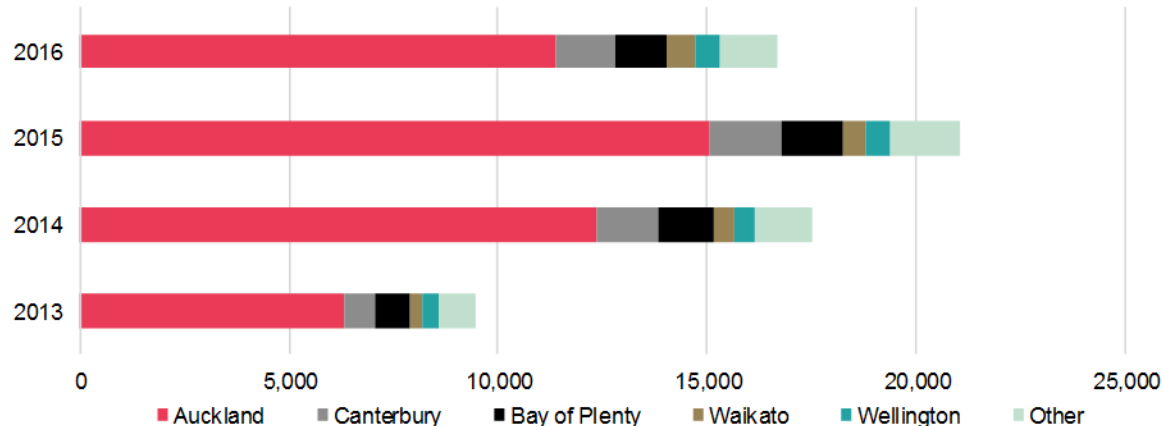

December 2016

FSV for 2016 have dramatically decreased from 2015. The 2016 decrease has been exacerbated due to the inflation of Indian FSV immediately prior to the implementation of Rule 18 in October 2015. The subsequent increased scrutiny of FSV applications by Immigration NZ has decreased the number of successful applications. Indian student numbers are projected to decrease substantially in 2017, possibly as early as the first trimester.

Korea

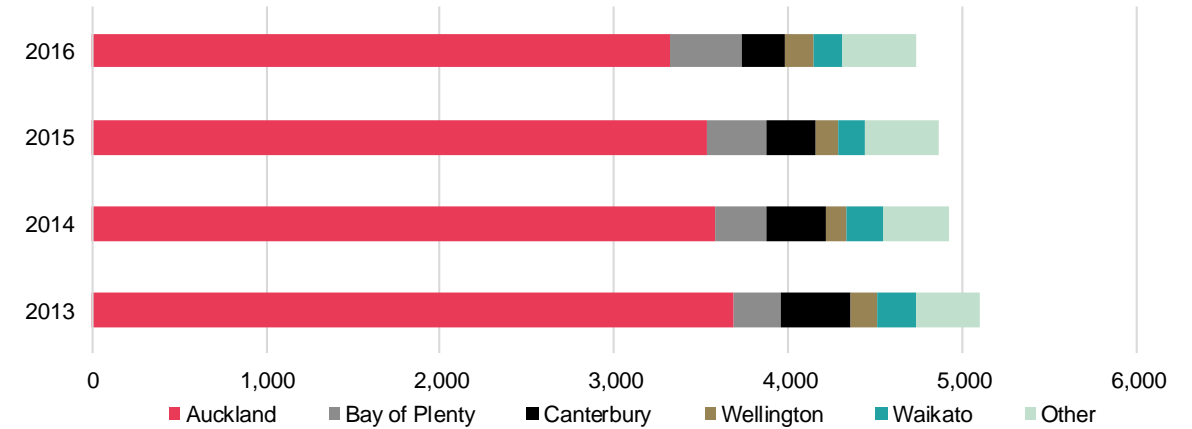

December 2016

The Korean market has been declining for a number of years due to less than favourable economic conditions, coupled with an increase in the quality of Korean education. Korean FSV for 2016 are up 7% (+145) compared to 2015. FSVs are up 11% compared to the previous three years with secondary schools experiencing the largest increase, followed by the PTE sector. Korean FSV for 2016 were the highest since 2012.

Philippines

December 2016

TSVs for the Philippines have increased by 5% compared to an average of the previous three years. However, since 2015, the number of TSVs for the Philippines has decreased by 36%. This was the result of the change to Rule 18, which impacted on visas issued to PTE students. The spike before this rule was re-implemented in late 2015 can clearly be seen in the top left graph, which means that the decrease in visas from 2015 to 2016 being more pronounced.

Trends by region

Auckland

December 2016

Visas for Auckland decreased by 5% from 2015 to 2016, but showed a 9% increase compared to the average of the previous three years. Both the increase and the decrease were driven by PTE students from India. ITP students have also decreased slightly from 2015 to 2016. School and universities students have both increased slightly for 2016 compared to 2015.

Hawke's Bay

December 2016

TSV showed a 19% increase in 2016 compared to an average of the three years from 2013 to 2016 across all sectors. This increase has come from China, India and Japan. There has been an 11% decline in Indian students from 2015 to 2016. There was also a slight decrease in PTE visas issued from 2015 to 2016, but an 11% increase in ITP students has more than offset this decrease. Overall, visas issued to international students in Hawke's Bay increased by 6% from 2015 to 2016, the highest percentage among reported regions.
